

Introduction to Python - Quiz

Reported by: Senior Syeda Khadija

01. Introduction to Python (20 Questions)

1. Python is classified as a:

- A) Low-level language
- **B) High-level language**
- C) Assembly language
- D) Machine language

Explanation: Python abstracts hardware details, making it high-level.

2. Python was created by:

- A) Linus Torvalds
- **B) Guido van Rossum**
- C) Dennis Ritchie
- D) James Gosling

Explanation: Guido van Rossum released Python in 1991.

3. Python's design philosophy emphasizes:

- A) Speed over readability
- **B) Readability and simplicity**
- C) Strict type enforcement
- D) Hardware-level control

Explanation: "Readability counts" is a core principle in Zen of Python.

4. Which of these is NOT a Python implementation?

- A) CPython
- B) Jython
- **C) JavaPython**
- D) PyPy

Explanation: Jython exists for Java, but "JavaPython" is not a real implementation.

5. Python uses:

- A) Static typing
- **B) Dynamic typing**
- C) Manifest typing

Introduction to Python - Quiz

D) Strong typing

Explanation: Variable types are determined at runtime.

6. The `__name__` variable equals `"__main__"` when:

A) A module is imported

****B) A script is run directly**

C) A function is called

D) An error occurs

Explanation: Used to execute code only when the file is run, not imported.

7. Python's primary memory management method is:

A) Manual allocation

****B) Garbage collection**

C) Stack-only allocation

D) Reference counting

Explanation: Uses reference counting + cyclic garbage collector.

8. Which tool is used for Python package management?

A) npm

****B) pip**

C) apt-get

D) yum

Explanation: `pip` installs packages from PyPI.

9. Indentation in Python is:

A) Optional

****B) Syntactically significant**

C) Only for loops

D) Replaced by braces in Python 3

Explanation: Indentation defines code blocks (unlike braces in C/Java).

10. Python's standard REPL is called:

A) Shell

****B) IDLE**

C) Console

D) Terminal

Introduction to Python - Quiz

Explanation: IDLE is Python's basic interactive environment.

11. The Zen of Python can be viewed by typing:

A) help()

****B)** import this

C) python --zen

D) show principles

Explanation: `import this` displays Python's guiding principles.

12. Python files typically end with:

A) .pt

****B)** .py

C) .python

D) .p

Explanation: Standard extension is `.py`.

13. Which is NOT a Python keyword?

A) lambda

B) yield

****C)** function

D) try

Explanation: Python uses `def` for functions, not `function`.

14. Python supports:

A) Single inheritance only

****B)** Multiple inheritance

C) No inheritance

D) Interface-only inheritance

Explanation: Classes can inherit from multiple parents.

15. The pass statement is used to:

A) Exit a loop

****B)** Create a placeholder

C) Skip iterations

D) Ignore errors

Explanation: `pass` does nothing but avoids syntax errors in empty blocks.

Introduction to Python - Quiz

16. Python's license is:

- A) Proprietary
- **B) Open-source (PSF License)**
- C) GNU GPL only
- D) BSD-only

Explanation: Python uses an open-source license approved by OSI.

17. Which statement about Python is FALSE?

- A) It has a large standard library
- B) It supports OOP
- **C) It compiles to machine code by default**
- D) It runs on many platforms

Explanation: Python compiles to bytecode, not machine code (by default).

18. Python's primary use cases include:

- A) Web development
- B) Data science
- C) Automation
- **D) All of the above**

Explanation: Python is versatile across many domains.

19. The first version of Python (Python 1.0) was released in:

- A) 1989
- **B) 1994**
- C) 2000
- D) 1991

Explanation: Python 1.0 followed the initial 1991 release.

20. Which of these is a Python built-in constant?

- A) inf
- **B) Ellipsis**
- C) null
- D) undefined

Explanation: `Ellipsis` (...) is a built-in constant, used in slicing.
