

Python Lists, Tuples & Dictionaries Quiz

1. What does this code output?

```
x = 5
if x > 3:
    print("A")
elif x > 4:
    print("B")
else:
    print("C")
```

- A) A
- B) B
- C) C
- D) A B

Correct Answer: A

Explanation: First true condition ($x > 3$) executes, skipping the rest.

2. Which evaluates to False?

- A) `bool(1)`
- B) `bool(-1)`
- C) `bool("False")`
- D) `bool(0)`

Correct Answer: D

Explanation: 0 is falsy; non-empty strings/numbers are truthy.

3. What is the ternary operator equivalent to: `y = 10 if x > 5 else 20`?

- A) `if x > 5: y = 10 else: y = 20`
- B) `y = (x > 5) ? 10 : 20`
- C) `y = switch(x): case >5: 10 default: 20`
- D) No equivalent

Correct Answer: A

Explanation: Ternary syntax condenses if-else into one line.

4. How many times does this loop run?

```
for i in range(3):
```

Python Lists, Tuples & Dictionaries Quiz

print(i)

- A) 2
- B) 3
- C) 4
- D) Infinite

Correct Answer: B

Explanation: range(3) generates 0, 1, 2.

5. What does while False: print("Hello") do?

- A) Prints once
- B) Prints infinitely
- C) Prints 3 times
- D) Never prints

Correct Answer: D

Explanation: Condition is never true.

6. Which exits a loop immediately?

- A) pass
- B) continue
- C) break
- D) exit()

Correct Answer: C

Explanation: break terminates the loop.

7. What does pass do?

- A) Skips iteration
- B) Exits the program
- C) Acts as a placeholder
- D) Restarts the loop

Correct Answer: C

Explanation: Used for empty code blocks.

8. What is the output?

Python Lists, Tuples & Dictionaries Quiz

```
for i in range(3):
```

```
    if i == 1:
```

```
        continue
```

```
    print(i)
```

A) 0 1 2

B) 0 2

C) 1 2

D) 1

Correct Answer: B

Explanation: continue skips printing when i == 1.

9. range(2, 5) generates:

A) 2, 3, 4

B) 2, 3, 4, 5

C) 1, 2, 3, 4

D) 5, 4, 3

Correct Answer: A

Explanation: End value is exclusive.

10. What does range(0, 10, 2) produce?

A) 0, 2, 4, 6, 8

B) 0, 1, 2, ..., 9

C) 2, 4, 6, 8, 10

D) 1, 3, 5, 7, 9

Correct Answer: A

Explanation: Steps by 2 (start=0, stop before 10).

11. What does else do in a for loop?

```
for i in range(3):
```

```
    print(i)
```

```
else:
```

```
    print("Done")
```

A) Never runs

Python Lists, Tuples & Dictionaries Quiz

- B) Runs if loop completes without break
- C) Runs only if break executes
- D) Always runs

Correct Answer: B

Explanation: else executes after normal loop completion.

12. Which is equivalent to if not x:

- A) if x is None:
- B) if x == False:
- C) if x == 0:
- D) All of the above

Correct Answer: D

Explanation: Checks for falsy values (False, None, 0, "", etc.).

13. What does try-except-else do?

- A) else runs if no exception occurs
- B) else runs if an exception occurs
- C) else replaces finally
- D) else is redundant

Correct Answer: A

Explanation: else executes only when try succeeds.

14. Which exception handles division by zero?

- A) ValueError
- B) TypeError
- C) ZeroDivisionError
- D) ArithmeticError

Correct Answer: C

Explanation: Specific to division/modulo by zero.

15. What does [x2 for x in range(3)] produce?**

- A) [0, 1, 4]
- B) [1, 4, 9]

Python Lists, Tuples & Dictionaries Quiz

C) [0, 1, 2]

D) Error

Correct Answer: A

Explanation: Squares of 0, 1, 2 (from range(3)).

16. Which creates a dictionary with keys 0-2 and squared values?

A) {x: x for x in range(3)}

B) {x: x**2 for x in range(3)}

C) [x: x**2 for x in range(3)]

D) (x: x**2 for x in range(3))

Correct Answer: B

Explanation: Dictionary comprehension syntax.

17. What is the output?

```
x = 5
```

```
while x > 0:
```

```
    print(x, end=" ")
```

```
    x -= 2
```

A) 5 4 3 2 1

B) 5 3 1

C) Infinite loop

D) 5 2

Correct Answer: B

Explanation: Decrements by 2 each iteration.

18. Which is NOT a loop type?

A) for

B) while

C) do-while

D) until

Correct Answer: D

Explanation: Python has no until loop.

Python Lists, Tuples & Dictionaries Quiz

19. What does for i, char in enumerate("Hi") do?

- A) Prints (0, 'H'), (1, 'i')
- B) Prints 'H', 'i'
- C) Raises an error
- D) Prints 0, 1

Correct Answer: A

Explanation: enumerate() returns index-value pairs.

20. Which keyword is used to skip to the next iteration?

- A) break
- B) pass
- C) continue
- D) skip

Correct Answer: C

Explanation: continue jumps to the next loop iteration.
