

Python Lists, Tuples & Dictionaries Quiz

1. What is the output of `[1, 2, 3] + [4, 5]`?

- A) `[1, 2, 3, [4, 5]]`
- B) `[1, 2, 3, 4, 5]`
- C) `[5, 7, 3]`
- D) Error

Correct Answer: B

Explanation: `+` concatenates lists.

2. Which method adds an item to the end of a list?

- A) `.insert()`
- B) `.append()`
- C) `.extend()`
- D) `.add()`

Correct Answer: B

Explanation: `.append()` adds a single item.

3. `nums = [1, 2, 3]; nums[1] = 4` changes `nums` to:

- A) `[1, 4, 3]`
- B) `[4, 2, 3]`
- C) `[1, 2, 3, 4]`
- D) Error

Correct Answer: A

Explanation: Lists are mutable; index 1 is updated.

4. What does `[x**2 for x in range(3)]` produce?

- A) `[0, 1, 4]`
- B) `[1, 4, 9]`
- C) `[0, 1, 2]`
- D) Error

Correct Answer: A

Explanation: List comprehension squares each `x` in `range(3)`.

5. Which removes and returns the last item of a list?

Python Lists, Tuples & Dictionaries Quiz

- A) `.remove()`
- B) `.pop()`
- C) `.delete()`
- D) `.clear()`

Correct Answer: B

Explanation: `.pop()` removes/returns the last item by default.
